PROFILE SUMMARY

Senior Software Engineer (SDE-III) with 5.6+ years of experience building high-concurrency, scalable architectures and 2+ years of expertise in Generative AI systems. Proven track record in implementing **Retrieval-Augmented Generation (RAG)** workflows, optimizing vector database queries, and enforcing **enterprise-grade security** protocols. Expert in Next.js (App Router), Advanced TypeScript, and FastAPI, with a deep focus on delivering secure, low-latency, and production-ready AI solutions.

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router), JavaScript, TypeScript (Generics, Conditional Types), HTML5, CSS3, Tailwind CSS, shadcn/ui, Radix UI, Redux, Jotai, TanStack Query.

Backend: Python (FastAPI, Flask), Node.js, Express.js, REST APIs, GraphQL, Socket.IO, WebSockets, SSE.

AI & GenAI: Retrieval-Augmented Generation (RAG), Vector Databases (Pinecone, Weaviate), AI-powered Recommendation Systems, Agentic AI Workflows, Prompt Engineering, LLM Inference.

Security & DevOps: Secure API Design, OAuth2/JWT, RBAC, Zod Validation, AWS, Docker, Git, GitLab, CI/CD pipelines.

Architecture & Quality: Scalable Microservices, SaaS Architecture, Frontend Performance (Core Web Vitals), Vitest, Jest.

WORK EXPERIENCE

SDE-III – Mobcoder (Jan 2022 – Present)

- 1 Architected and delivered scalable full-stack SaaS applications using Next.js App Router, supporting high-concurrency user traffic.
- 2 Implemented production-ready **Retrieval-Augmented Generation (RAG)** pipelines, integrating LLMs with vector stores to deliver context-aware AI solutions.
- 3 Designed and enforced **enterprise security standards**, including RBAC, JWT-based authentication, and automated data validation using Zod to ensure zero-vulnerability deployments.
- 4 Optimized cloud infrastructure and backend services using FastAPI and Node.js for low-latency performance and horizontal scalability.
- 5 Integrated Advanced AI capabilities and Agentic workflows into customer-facing products, improving user engagement by 30%.
- 6 Led frontend architecture audits and optimized Core Web Vitals, resulting in a 40% improvement in LCP and overall Lighthouse scores.

Full Stack Developer – Siscaso (Jun 2020 – Dec 2021)

- 1 Built MERN stack applications with focus on scalability and performance.

Software Developer – DreamBig Networks (Aug 2019 – May 2020)

- 1 Delivered software solutions addressing real-world user problems.

PROJECTS

TIFIN IP

- AI-powered annuity recommendation system for customers using Next.js and FastAPI.
- Personalized decision-making using AI algorithms.
- Improved engagement through intelligent financial assistance.

GoGiv

- SaaS platform for self-registration and portfolio management.
- Supports enterprise clients including Naukri.com.

Wyvate

- Food delivery and restaurant management application with real-time tracking.

Youshd

- Influencer monetization platform integrated with Instagram.

Tiffin Give

- Led development resulting in 25% increase in active users.
- Achieved 99% uptime and improved system efficiency.

EDUCATION

MCA – Computer Applications, Vellore Institute of Technology (CGPA: 8.65/10)

BCA – Computer Applications, Ranchi University
